We estimated associations, not causal effects

Conditional Block B posterior: final-percentage points per one training standard deviation.

Input	Mean association	95% credible interval
LMS page views	+0.34	[-0.21, +0.88]
LMS participations	-0.09	[-0.63, +0.44]
EVC source cost/support	-0.21	[-0.84, +0.41]
EVC expectancy	-0.05	[-0.70, +0.60]
EVC value	-0.13	[-0.73, +0.47]
Wellness	+0.20	[-0.39, +0.78]

These estimates do not tell us what would happen if we intervened to improve wellness.

The uploaded RETRO is a distinct text source

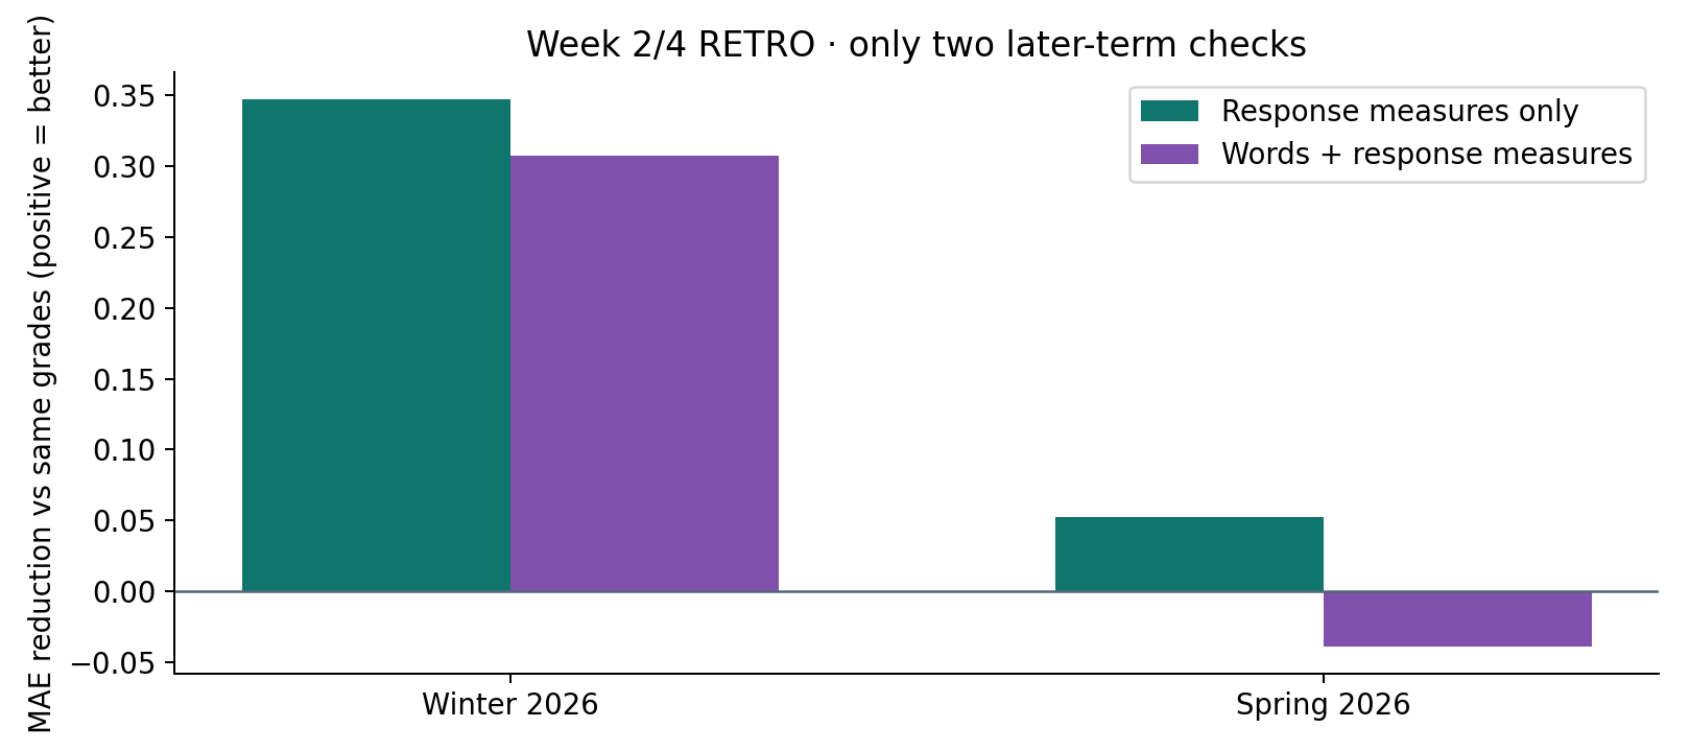

870 response rows; 74 students; three prompts across Weeks 2, 4, 6, 8 and 10.

Term	Students in grade table	Week 2/4 respondents
Fall 2025	20	13
Winter 2026	40	25
Spring 2026	43	30

No exact timestamps. Weeks 6/8/10 are excluded. Earlier three terms did not have this instrument.

RETRO content has not shown a consistent gain

Larger grades-only baseline; Week 2/4 text; two later-term checks; Ridge alpha 10.

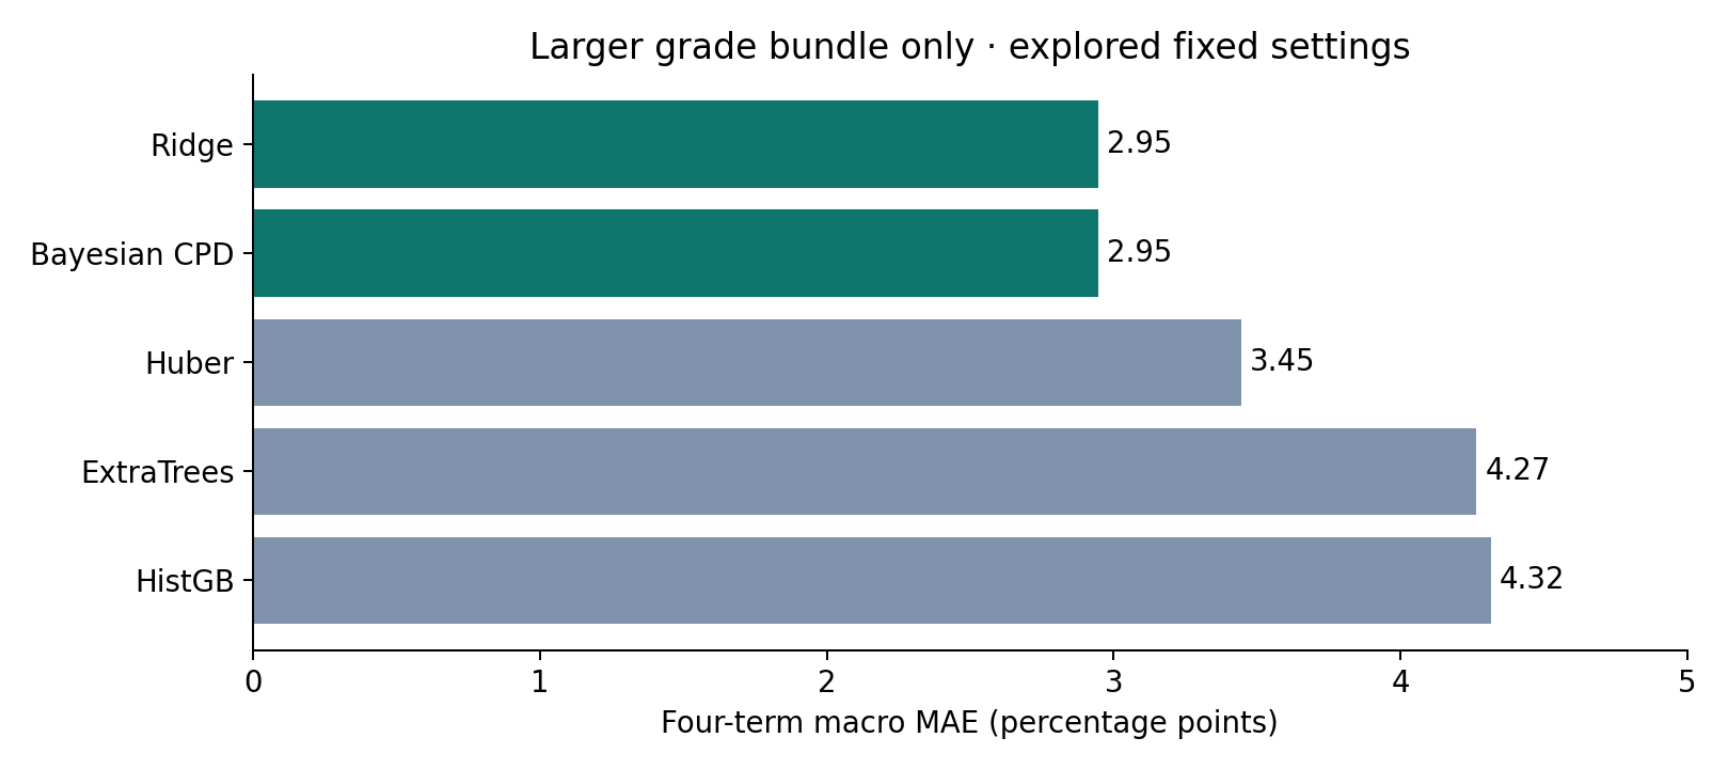

Separate the words from who responds.

No consistent independent text benefit established.

Positive = less error. Fixed text baseline; prior/regularization sensitivities are in the result tables.

A bigger model did not improve the grade-based forecast

Same four later-term numeric checks; fixed candidate settings; lower MAE is better.

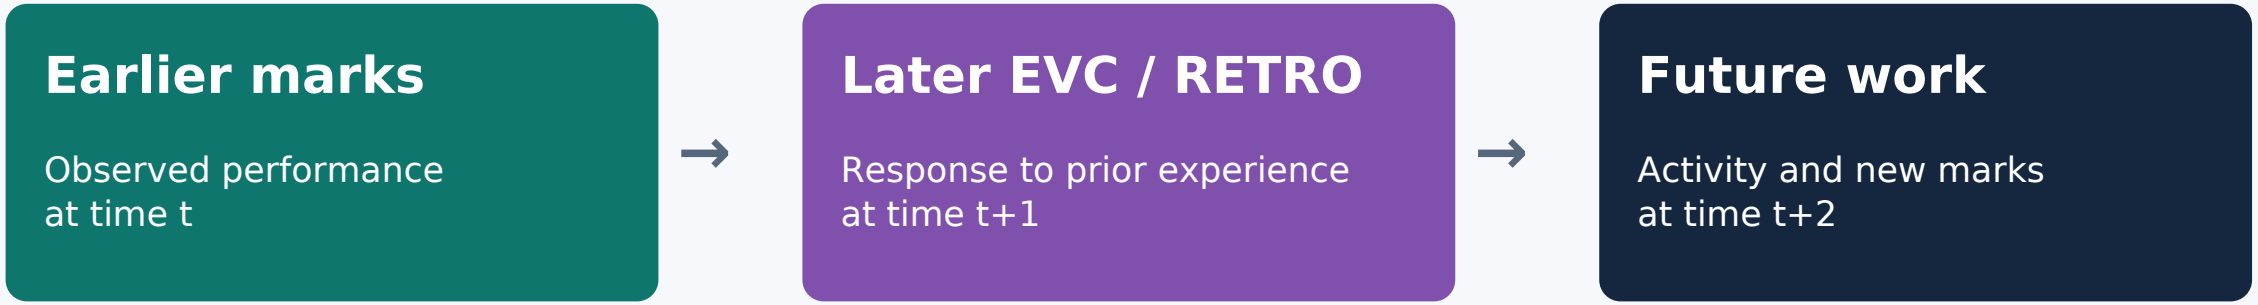

Keep the simple baseline.

Improve the problem definition before adding complexity.

Improve temporal structure and measurement first

A candidate longitudinal design—not a newly fitted or causally identified DAG.

1 Verify grade release/revision dates and survey submission times.
2 Validate questionnaire scoring and coded RETRO themes.
3 Compare prediction of remaining coursework at the same checkpoint.
4 Test partial pooling, robust residuals and missing-data models against the simple baseline.

Confirmed category weights: 100% main grade

The user confirmed the same weights across all six historical non-summer terms.

Main grading category	Course weight
Written Mastery I	20%
Written Mastery II	35%
Verbal Mastery I	10%
Verbal Mastery II	10%
Teamwork Mastery	10%
Life-Long Learning Mastery: Growth Mindset	10%
Life-Long Learning Mastery: Resilience & Agency	5%

Extra credit: Surveys +0.75 points; Team Manager +0.25 points; My Learning Coach 0 points.

Separate earned marks from remaining performance

Remaining-work accounting is implemented and tested; historical remaining-work outcomes are not yet reconstructed.

Final total = known earned contribution
+ (1 − known course weight) × remaining main-work percentage
+ extra credit

SMR/Summer is explicitly excluded. Current cohort: 191 students, all Fall/Winter/Spring.

Next required data: complete historical grade exports, effective assignment denominators, extra credit, and actual score-availability history.
